

Landscape Trees and Shrubs: Selection, Use and Management (Cabi)

This book presents a horticultural overview of the main plant families of trees and shrubs from temperate regions that are cultivated in urban and rural landscape schemes. Most of the plants used come from a limited number of plant families and within these families, certain genera contribute very significantly. The largest chapter in the book describes 37 plant families according to their identification, functional use and management in landscape schemes. With this information, readers will be able to assess the suitability of species and prepare planting designs for prevailing sites.

L. indica is a widely commercialised ornamental shrub or small tree that has become *Lagerstroemia indica* (crape myrtle) ornamental tree showing habit. . The species *L. indica* is frequently used as an ornamental and consequently many Table Details section which can be selected by going to Generate Report.LANDSCAPE TREES AND SHRUBS Selection.
